User's Guide

Prerequisites:
To Run correctly the application, you must have this list of programs installed on your device:
- IDE (like IntelliJ or Eclipse)
- PostgreSQL

Run the BackEnd:
1. Clone the application code from the link git clone https://scarpitta@bitbucket.org/mastrofini/isssr1718-integrazione-ticketing-system.git.
2. Then you have to create a DB on postgres to save the data of the application.
3. Config the file src.main.resource.application.properties modifying the line:
   a. spring.datasource.url = "URLOfDataBasePostgres";
   b. spring.datasource.username = "usernamePostgres";
   c. spring.datasource.password = "passwordPostgres";
4. Restore the supplied isssr-integrazione.sql in the db.
5. Run the file src.main.java.it.uniroma2.TicketingSystemApplication.java

Setting the FrontEnd
1. Clone the application code from the link https://scarpitta@bitbucket.org/mastrofini/isssr1718-integrazione-ticketing-system.git.
